

4.React.js_HOL

Src/Post.js:

```
class Post {
  constructor(id, title, body){
    this.id = id;
    this.title = title;
    this.body = body;
  }
}
export default Post;
```

src/posts.js:

```
import React from 'react';
import Post from './Post';

class Posts extends React.Component {
  constructor(props) {
    super(props);
    // Initialize the component with a list of Post in state
    this.state = {
      posts: [],
      hasError: false
    };
  }

  // Method responsible for using Fetch API
  loadPosts() {
    fetch('https://jsonplaceholder.typicode.com/posts')
      .then(response => response.json())
      .then(data => {
        // Map the raw data into our Post model
        const formattedPosts = data.map(item => new Post(item.id,
item.title, item.body));
        this.setState({ posts: formattedPosts });
      })
      .catch(error => {
        // Trigger the error boundary if the fetch fails
        this.setState({ hasError: true });
        console.error("Error fetching posts:", error);
      });
  }

  // Hook to make calls to loadPosts() which will fetch the posts
  componentDidMount() {
```

```

        this.loadPosts();
    }

    // Method to display any error happening in the component as alert
    messages
    componentDidCatch(error, info) {
        alert(`An error occurred: ${error.toString()}`);
    }

    // Display the title and post in html page using headings and paragraphs
    render() {
        if (this.state.hasError) {
            return <h1>Something went wrong fetching the posts.</h1>;
        }

        return (
            <div>
                <h1>Blog Posts</h1>
                {this.state.posts.map(post => (
                    <div key={post.id} style={{ borderBottom: '1px solid
#ccc', paddingBottom: '10px' }}>
                        <h2>{post.title}</h2>
                        <p>{post.body}</p>
                    </div>
                ))}
            </div>
        );
    }
}

export default Posts;

```

src/app.js:

```

import Posts from './Posts';

function App() {
    return (
        <div style={{ padding: '20px' }}>
            <Posts />
        </div>
    );
}

export default App;

```

Output:
